Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents the user or an external system interacting with the application. It sends input to and receives output from the system
Rectangle with numbered header	Process	Represents a function that processes the input data. It transforms the data into meaningful output.
Rectangle (solid fill, no number)	Data Store	Represents a location where system data is stored. It keeps information for future retrieval and processing.
Labeled arrow	Data Flow	Represents the movement of data between entities, processes, and data stores. It shows the direction of information flow within the system.

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
