

Solution Requirements

Date	4 July 2026
Team ID	SWTID-2026-7566
Project Name	Personalized Networking Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>Users can securely access the application. Basic authentication can be added for personalized usage.</i>	High
2	Authorization levels	<i>Users can generate conversation starters, perform fact checks, and submit feedback. Admin can manage application data.</i>	Medium

3	External interfaces	<i>The system connects with the Wikipedia API for fact checking and uses AI models (DistilBART & GPT-2) for topic extraction and conversation generation.</i>	High
4	Transactions processing	<i>The application processes user input, generates conversation suggestions, stores conversation history, and records feedback.</i>	High
5	Reporting	<i>Displays extracted topics, conversation suggestions, fact-check results, and user interaction history.</i>	Medium
6	Business rules, etc.	<i>Suggestions are generated based on event themes and user interests. Feedback is stored to improve future recommendations.</i>	High
7	Compliance to laws or regulations	<i>User data is handled securely, and publicly available information is used for fact checking.</i>	Medium
8	Other	<i>Supports an easy-to-use interface for networking assistance with AI-generated recommendations.</i>	Low

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	<i>The application should generate responses quickly and provide a smooth user experience.</i>	<i>Response time less than 3 seconds.</i>
2	Scalability	<i>The system should support multiple users and future feature expansion.</i>	<i>Supports 100+ concurrent users.</i>
3	Security & Data Privacy	<i>User inputs and stored history should be handled securely.</i>	<i>Secure data handling and protected storage.</i>
4	Reliability & Availability	<i>The application should remain available with minimal downtime.</i>	<i>99% system availability.</i>
5	Usability & Accessibility	<i>The interface should be simple, intuitive, and easy for all users.</i>	<i>Easy navigation with responsive UI.</i>

6	Other	<i>The application should be maintainable and easy to update with new AI models or features.</i>	Modular code structure and reusable components.
