

Project Initialization and Planning Phase

Date	4 July 2026
Team ID	SWTID-2026-7566
Project Title	Personalized Networking Assistant
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed solution is an AI-powered **Personalized Networking Assistant** that helps users build meaningful professional connections by generating personalized conversation starters based on event descriptions and user interests. It also provides fact-checking and feedback features to improve networking confidence.

Project Overview	
Objective	Develop an AI-powered networking assistant that generates personalized conversation starters and helps users communicate confidently at networking events.
Scope	The system analyzes event descriptions, extracts key topics, generates AI-based conversation suggestions, and provides fact-checking and feedback features.
Problem Statement	
Description	Many students and professionals find it difficult to start conversations during networking events due to lack of confidence and relevant discussion topics.

Impact	Providing AI-generated conversation starters improves communication skills, networking confidence, and professional engagement.
Proposed Solution	
Approach	Use AI models to analyze event descriptions, extract important topics, and generate personalized conversation starters based on user interests.
Key Features	Key Features • AI-based event theme extraction. • Personalized conversation starter generation. • Wikipedia-based fact checking. • Conversation history and feedback logging.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU for model execution	Intel i5/i7 Processor
Memory	RAM	8 GB
Storage	Project files and logs	512 GB SSD
Software		
Frameworks	Backend & Frontend	FastAPI, Streamlit

Libraries	AI & Utilities	Transformers, Torch, Requests
Development Environment	IDE	Visual Studio Code
Data		
Data	Event descriptions and user interests	User Input, JSON Files
